
Caramba Quick

Caramba Quick

The KnightWell Caramba comes from Dordrecht, Holland and is a unique hot beverage dispenser that offers a wide variety of hot beverages. It was designed using computerised CAD systems to give it a sophisticated look yet simple and functional in its uses.

The exterior of the Caramba has been designed to give it a compact and sleek look that blends with any indoor environment and is intended for use in offices, boardrooms, lounges, staff rooms, function rooms, catering outlets and at exhibitions.

The design of the interior makes it easy to clean and maintain and to refill the ingredients in a matter of minutes.

This versatile dispenser offers 8 different hot beverages; with separate controls for sugar and creamer through the use of simple touch button controls.

Using microprocessors, the same blend and taste for each type of beverage can be programmed, with great consistency anytime and every time.

The dispenser can be programmed to switch off, for example, at night. This translates to more efficient energy consumption and results in cost savings. In addition, a digital display panel provides customised texts for corporate identity.
