	1 portion of hot milk	7 sec
Dimensionsn (w x d x h)	150/450/380	
Contens (liter)	2.5	
Voltage (Volt AC)	115 / 230	
Power (Watt)	1100	
Weight (kg)	10	

Technical specification subject to change

## Speedy ans Simplicity

In just 2 seconds the Foamino will supply a perfect milk froth for Cappuccinos to amaze your guests. Thanks to a special frothing technique the froth is very compact and long-lasting. The dosing of the Cappuccino is done through the keypad that can be programmed to always provide the same amount of hot milk or milk froth.

Of course, the dosing of the milk can also be manually adjusted do any size of cups. The Foamino, ...simply ingenious.

## Innovative technology

The Foamino, small in dimensions and attractive in its design allows for an easy installation anywhere. Thanks to our innovative technology the milk is held at a constant temperature of 73° C. Unlike other milk frothing units using refrigerated milk our hot milk system eliminates and destroys any bacteria growth. A unique heating system controls that the temperature difference will never fluctuate more than +/- 5 degrees Celsius to avoid both the coagulation of the egg white and the undesired taste of burnt caramel.

## Uncompromised Hygiene

The automatic interval cleaning system heats up the cleaning agent to 80°C pumping 2 dl through the milk line every 50 seconds. Thanks to the use of food safe milk bags makes the manual cleaning of the milk container unnecessary. All parts of the milk system are easily detachable and are dishwasher safe. The Foamino provides a perfect thorough cleaning to ensure a hygienic working environment at all times. As simple as that.
